

WEB SURVEY GRAPHICS RESULTS

SECTION B TECHNICAL REQUIREMENTS

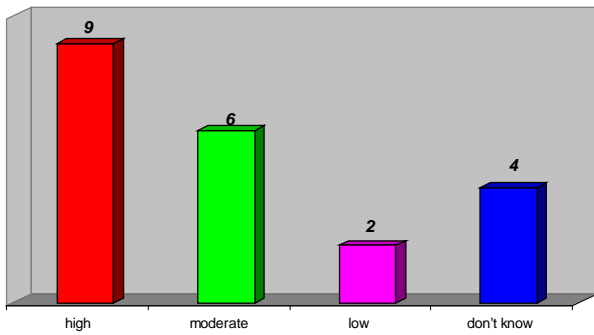

Q1 Opera will require a dedicated computation system; do you think we should consider a web-based interface for input, or do you prefer a file based offline system?

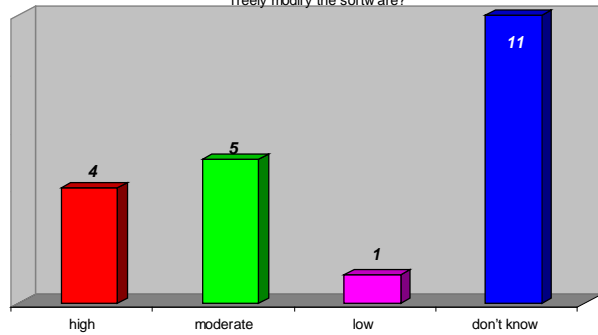

Q2 Do you prefer a text format (csv, xml, ...) input for RIAT+ or a software-guided process?

Q3 Do you think it could be useful to get an online demo version of the software?

Q4 OPERA will provide a complete software implementation that is free and usable for everyone; would you be interested in an open-source license that also let the user freely modify the software?

Q5 Would you like a support tool linking GANS activities and emissions to preview their influence?
